

## **HOW TO CREATE INSERTS IN MASTER CARDBUILDER**

Go to PAINT in your accessories folder on your PC and flood fill a new page with White and save this page as a JPEG called WHITE PAGE to your pictures folder.

Open Master Cardbuilder and create your sheets from the designs you are wanting to use, then open the WHITE PAGE file - go to your Pastry cutters and Choose the shape you want, I used the Oval.

Shape the Oval to the size you want and Select ONLY one step level - Click Create Stack and it will load this into the Palette along the bottom. Take note which section this is in as it will not show any colour only white.

Go back to your main cardbuilder screen and Clear the Layers Palette on the righthandside - Load your backing Sheet that you want to use for your insert then load the White Oval and position this on the Righthandside of your Insert page.

Type in your Text and position this in the White Oval and then Copy this insert to your Palette.

Go to Print and print out.
